

Alex Kirlik received his PhD in human-machine systems engineering from The Ohio State University and is currently a Professor in the Departments of Computer Science, Industrial and Systems Engineering, Electrical and Computer Engineering, Psychology, member of the Beckman Institute for Advanced Science Technology, and former Head of Human Factors in the Institute of Aviation at the University of Illinois at Urbana-Champaign. He has also held positions in either engineering or psychology at Georgia Tech, Stanford University, Yale University, the University of Connecticut, NASA Ames Research Center and the Liberty Mutual Research Institute for Safety. He is editor of the *Oxford Series on Human-Technology Interaction*, a collection of books or volumes including topics such as information foraging theory, neuroergonomics, domestic information and communication technologies, technological support for judgment and decision making, social interaction in virtual spaces, design thinking, and cross-cultural technology design. He is also co-editor (with J.D. Lee) of the *Oxford Handbook of Cognitive Engineering*, editor of K.J. Vicente's *Human-tech*, editor of *Adaptive Perspectives on Human-Technology Interaction*, and co-editor (with A. Kramer and D. Weigmann) of *Attention: From Theory to Practice*. His most recent research centers on developing new design paradigms and techniques for coupling humans and control automation in transportation systems (NSF, NASA), visual analytics to support judgment and prediction (IARPA, U.S. Navy), developing virtual reality simulations for aviation safety research (NSF), and the design of domestic robots to support aging-in-place (NSF, National Robotics Initiative).
